

ABSTRACT

A portable wireless telecommunications device has electronic computer visual display includes at least one central display screen and at least two additional screens
5 respectively disposed foldably to the right and left of said central screen, for displaying simultaneous, multiple images to a user. The foldable display has at least two mutually connected foldable sub-display units, and it includes a user attachable and detachable connector, for
10 user-assembling of the sub-display units into mutual connection with each other. Each of the two sub-display units have user-deployable supports (e.g. a rigid angular support member) for maintaining the sub-display units in an upwardly projecting disposition during use.
